

4 Stages Of Cirrhosis Of The Liver

1. Inflammation

- Low level drinking
- Chemicals/Viral infection
- Continual inflammation --> Cell death
- Reversible - Lifestyle changes & medication

2. Fibrosis

- ~ "Compensated cirrhosis"
- Partial scar tissue develops
- Prognosis still positive
- Cease alcohol consumption/
Treatment for viral issues

3. Cirrhosis

- Widespread scarring
- Liver function compromised
- Becoming irreparable

4. Liver Failure

- ~ "Decompensated cirrhosis"
- Hepatic portal vein hypertension
- Ascites
- Jaundice
- Irreparable --> Transplant/Symptom management
